04 Automated and Live Proctoring

05 Verify Identity and Test Environment

06 Limit Web Access During Tests

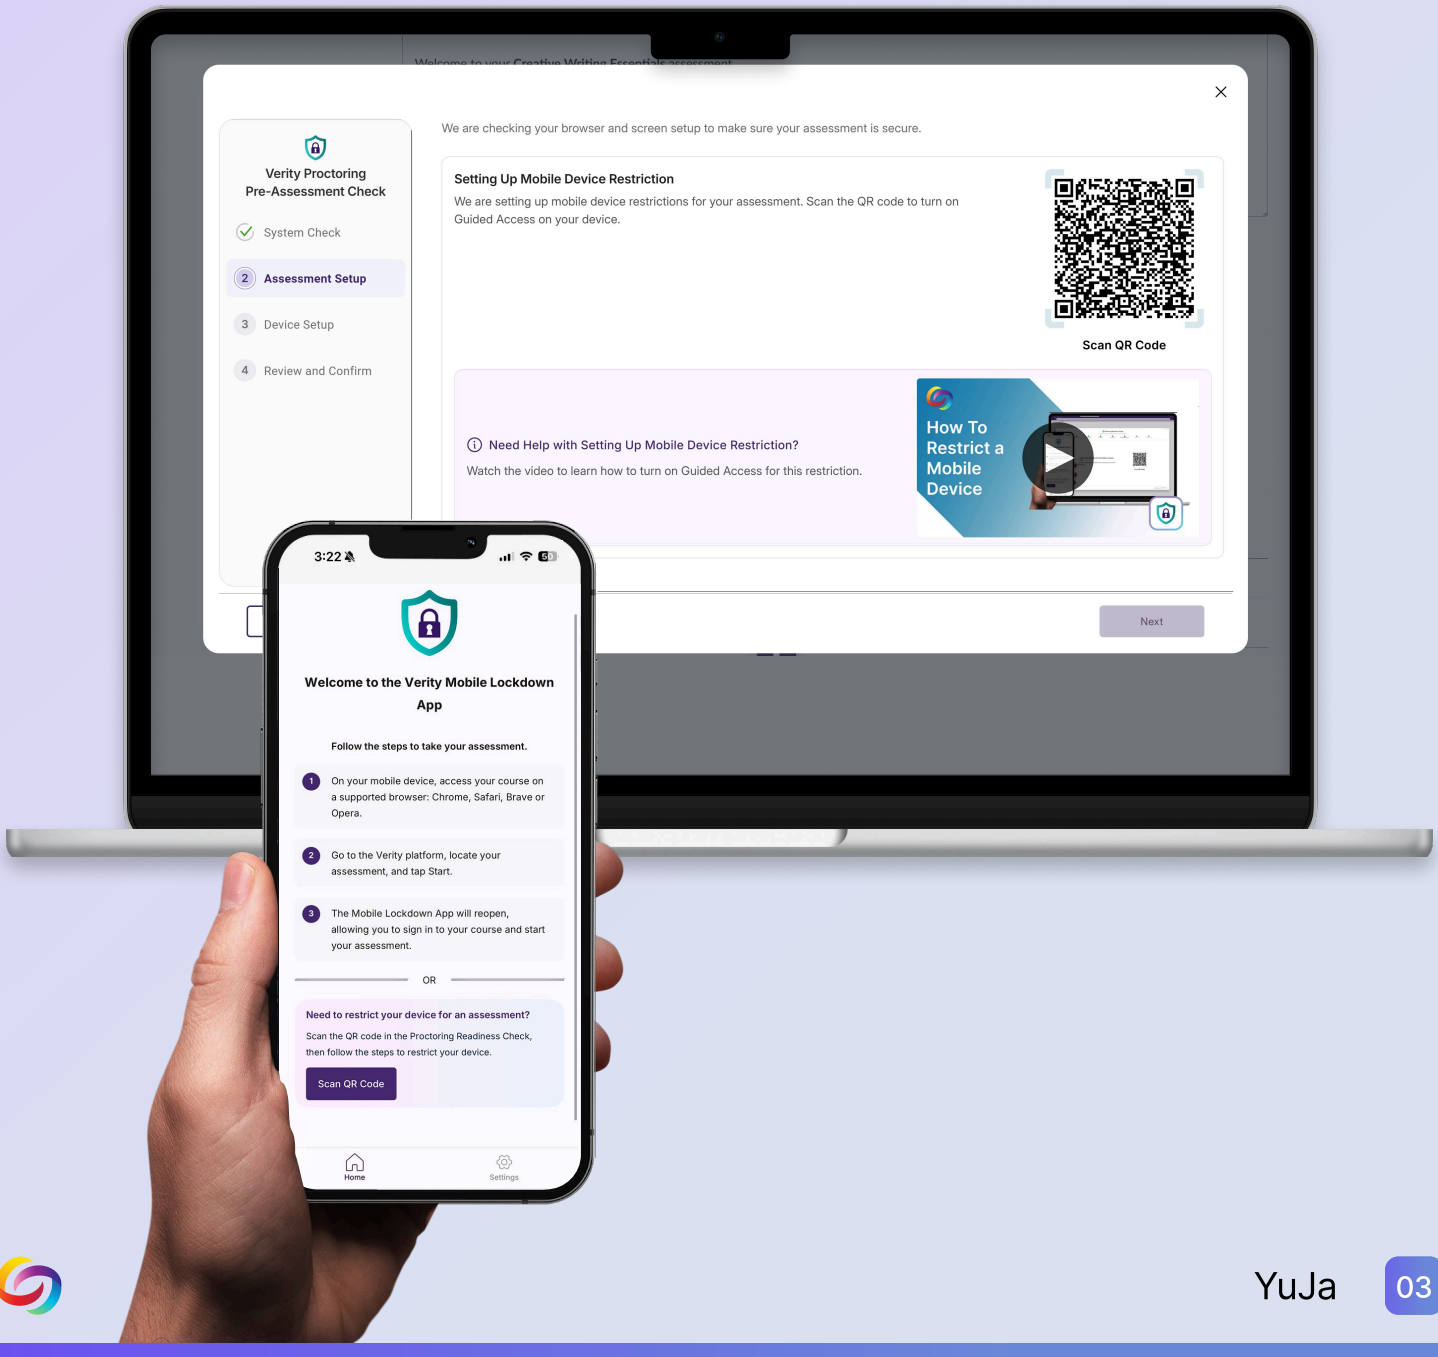

07 Set Different Rules for Different Test-Takers

08 Manage Everything From Your LMS

Mobile Testing Made Seamlessly Secure

Give test-takers the flexibility to take proctored exams on their mobile devices while maintaining the same security standards as desktop testing. The app locks devices to allow access only to the assessment while preventing app switching and unauthorized activity. The module is available for iOS, Android, and Chrome OS devices.

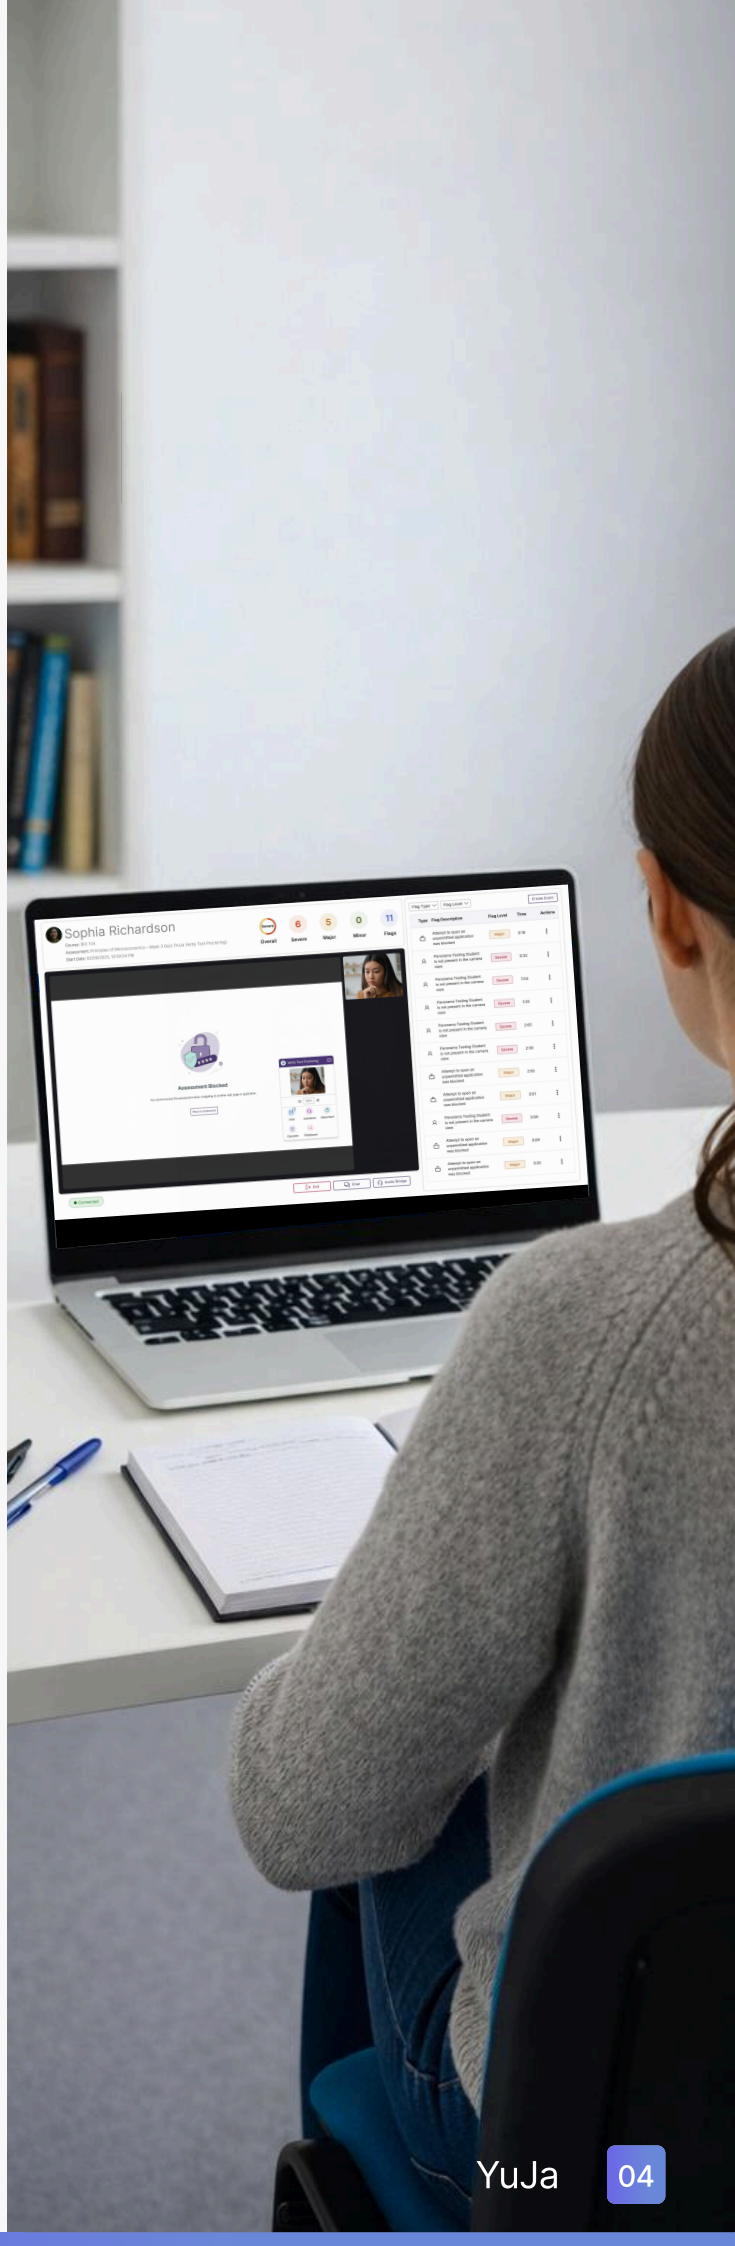

Automated and Live Proctoring

Select the proctoring approach that best fits your assessment needs. The YuJa Mobile Lockdown App supports multiple proctoring models, including automated monitoring, Live Proctoring, and Live Check-In, allowing institutions to align exam security with instructional goals and course requirements.

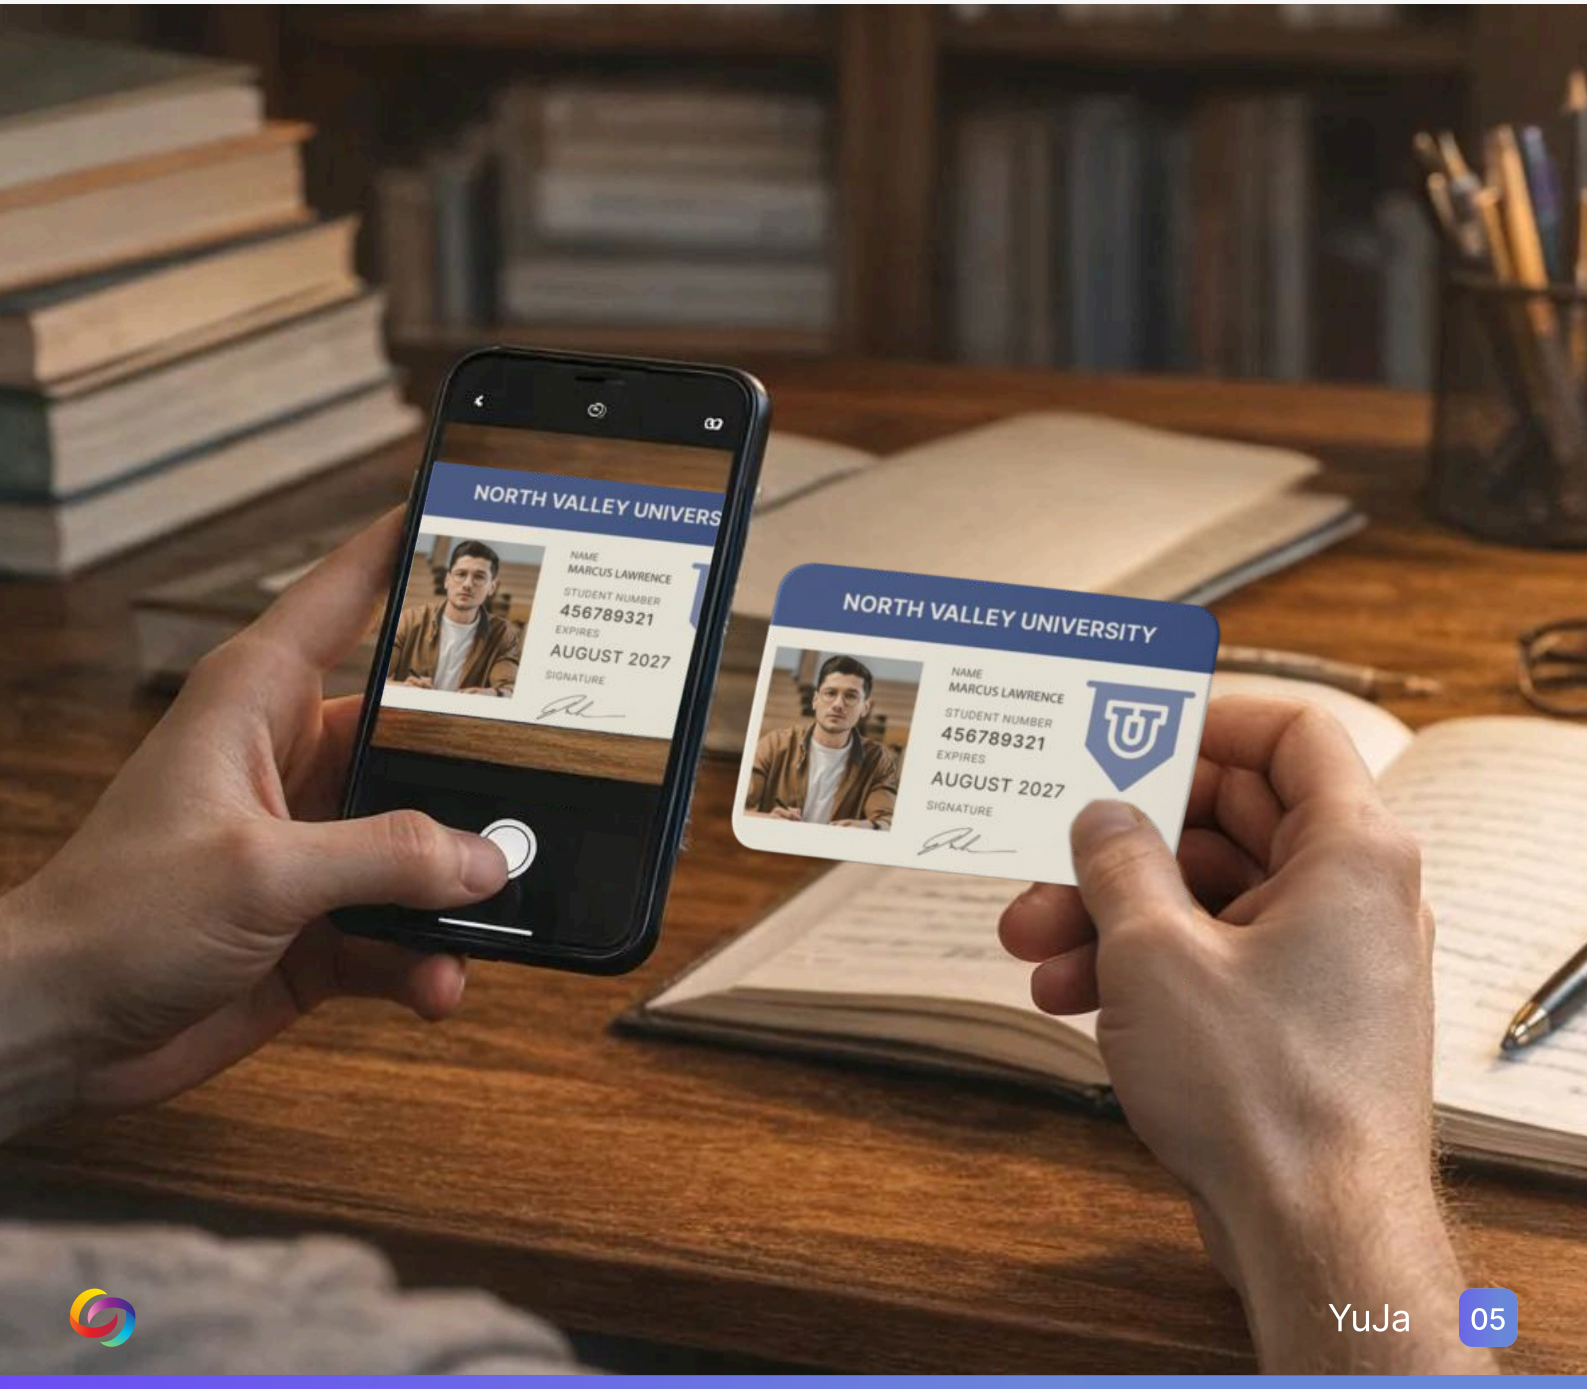

Automated monitoring leverages AI-driven analysis to detect potential integrity issues at scale, while Live Proctoring introduces real-time human oversight during exams. Live Check-In provides a flexible alternative by enabling on-demand proctor intervention only when flagged behaviors or student questions require attention.

These proctoring options are delivered through a consistent, secure testing environment across devices, ensuring the same level of protection whether test-takers use phones, tablets, or desktop computers, without compromising accessibility or exam continuity.

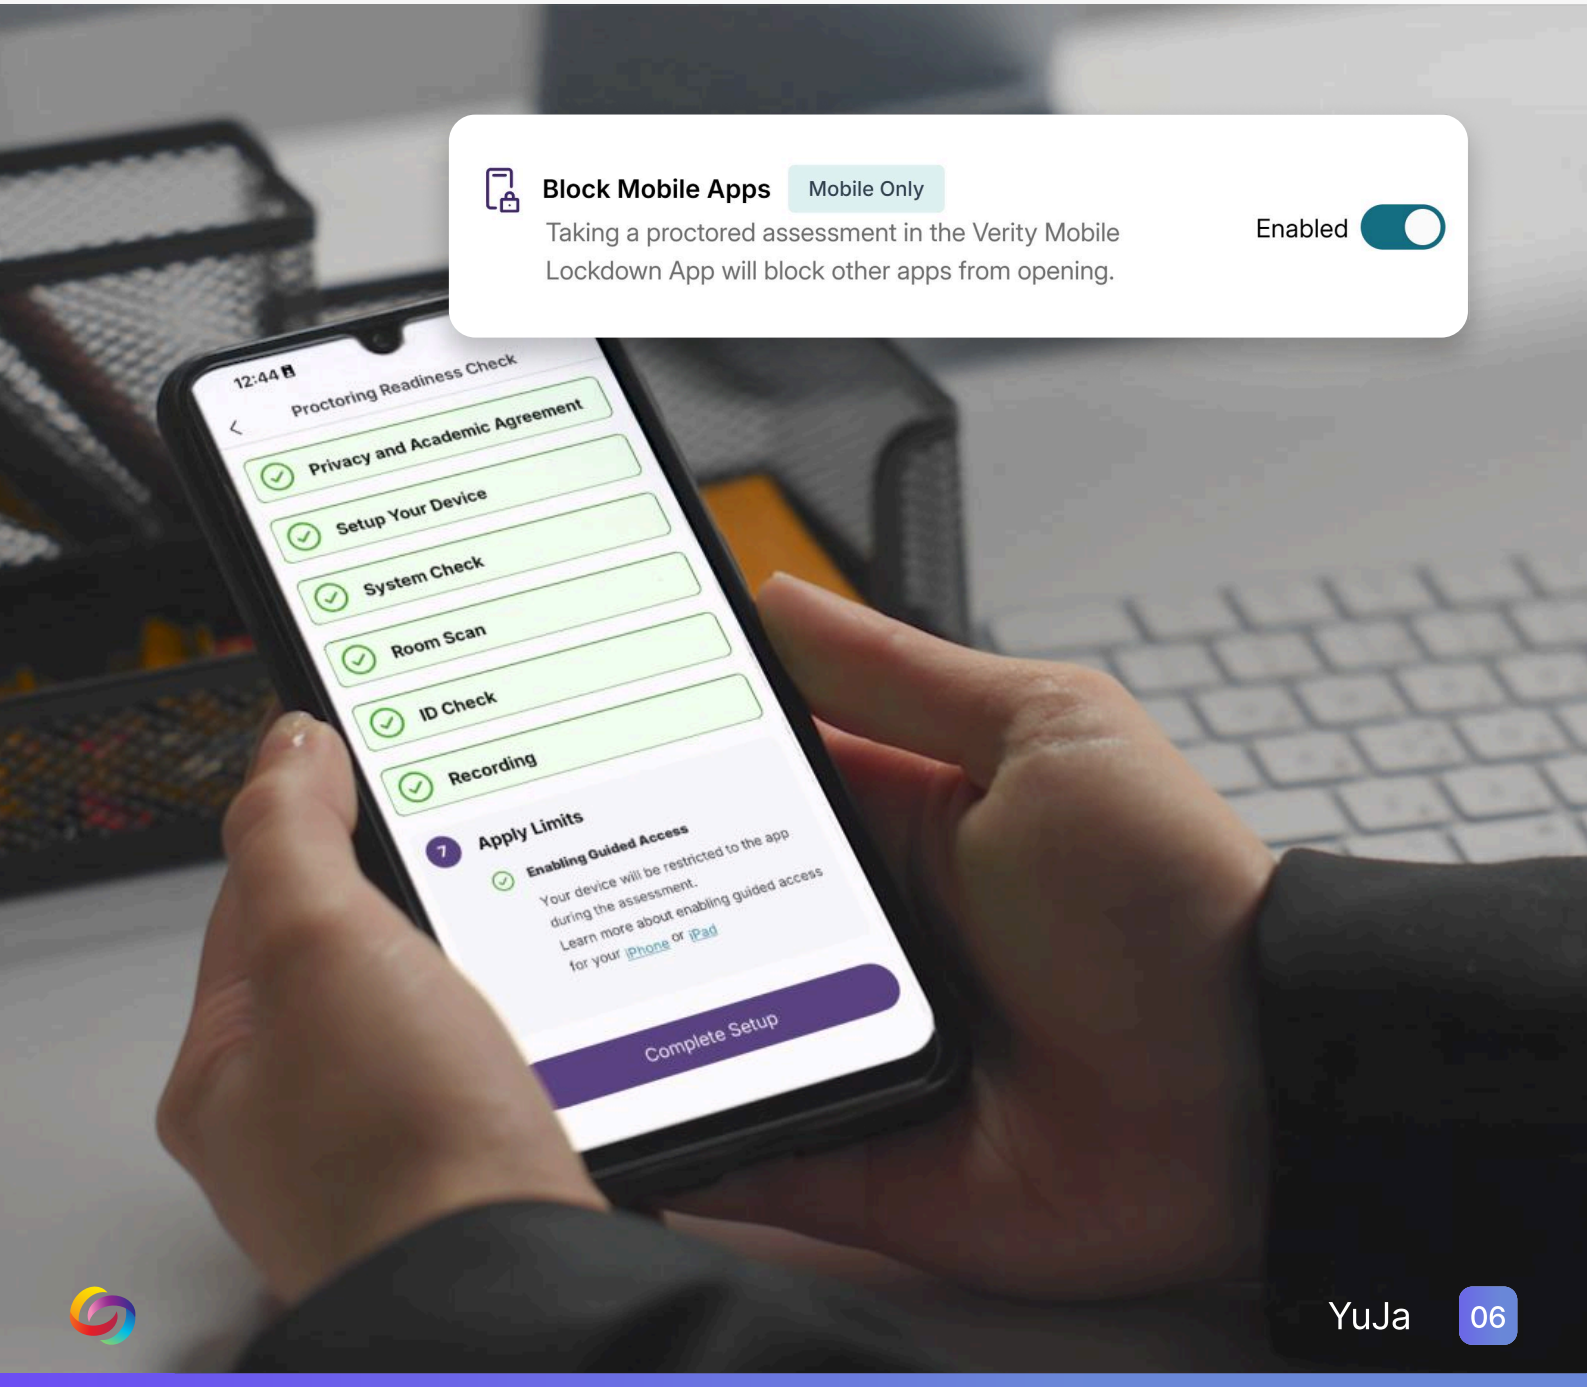

Verify Identity and Test Environment

YuJa Verity can verify test-taker identity before assessments begin using the device's camera. This built-in verification ensures that the right student is taking the exam, maintaining assessment integrity from the start. Proctors can also confirm the test-taker's environment with an optional Room Scan. This feature provides a quick overview of the testing space, helping to identify any potential sources of unauthorized assistance.

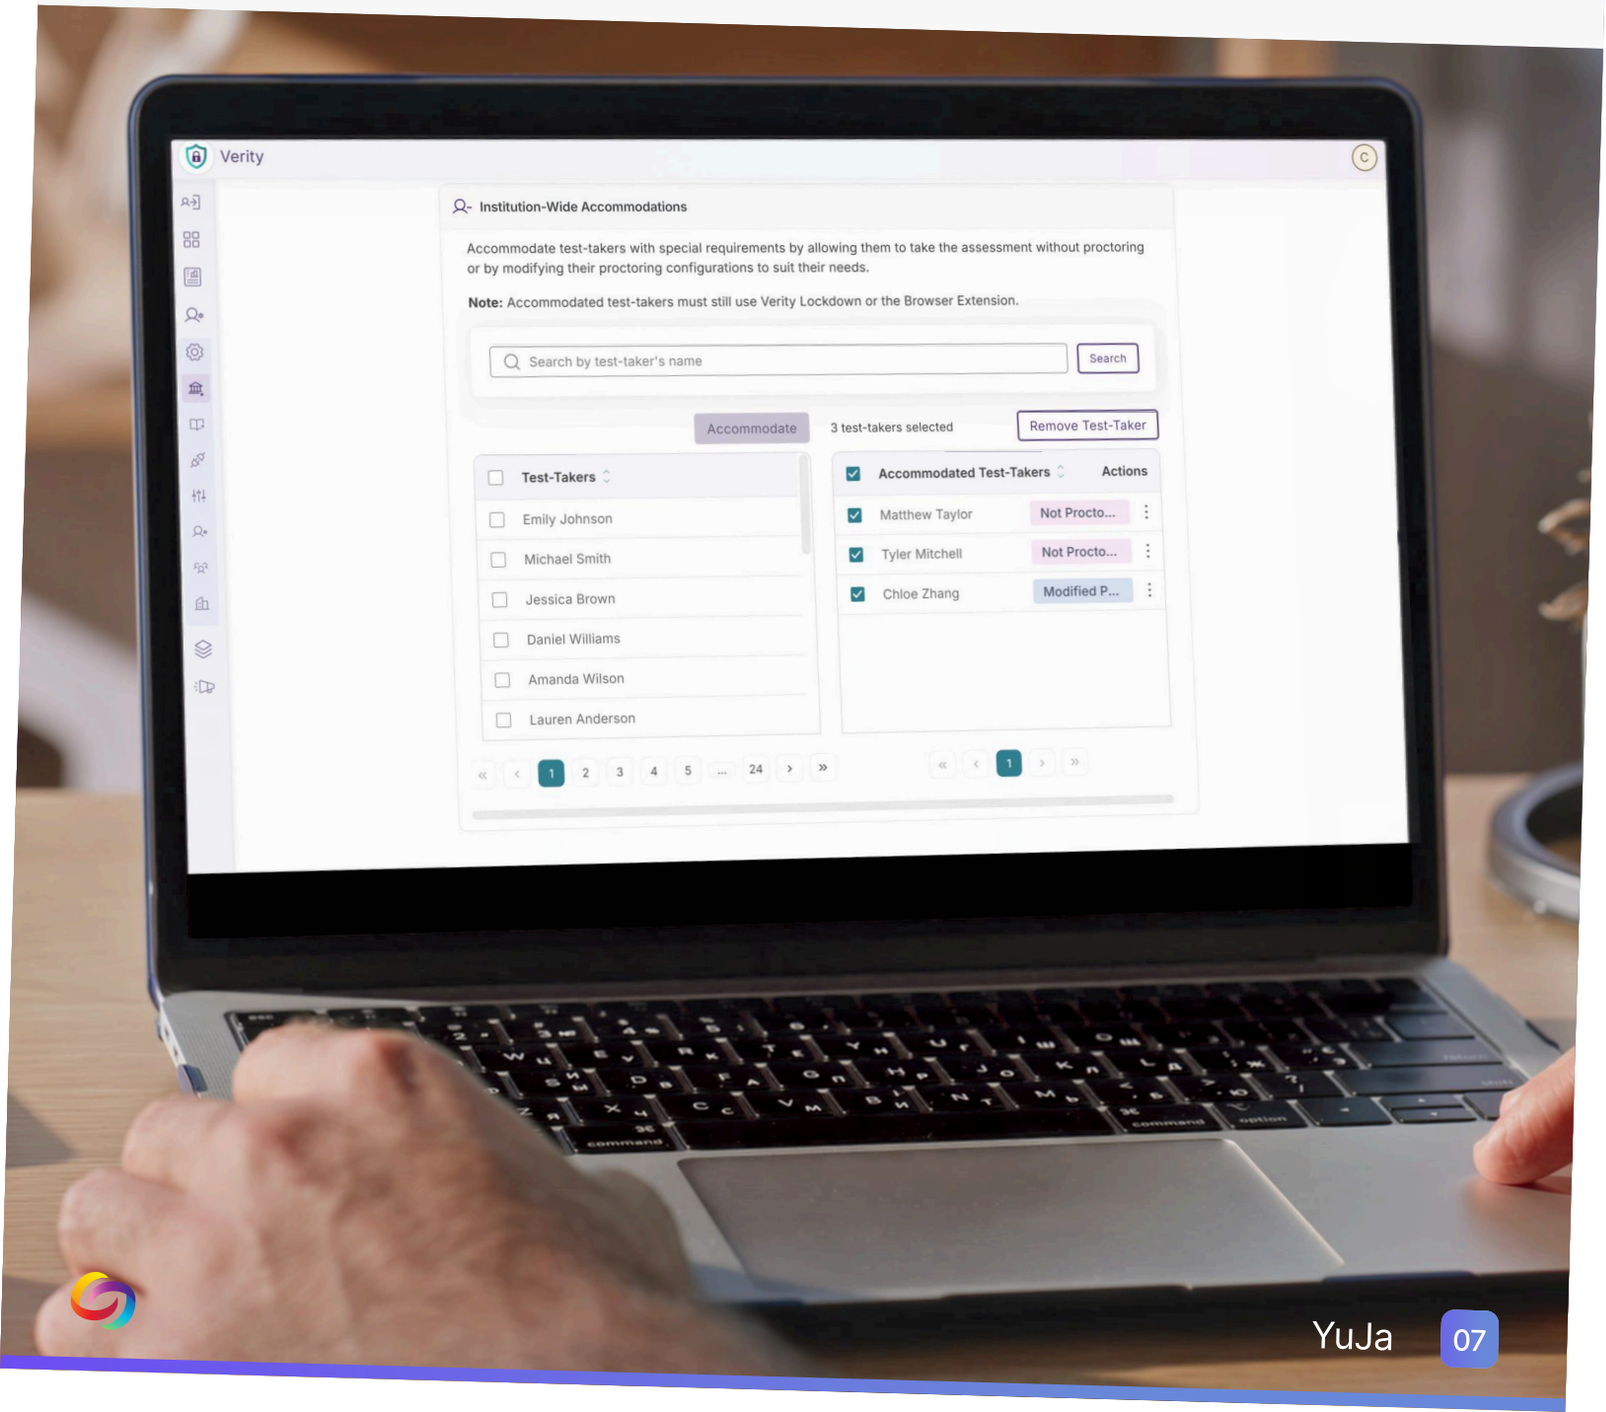

Limit Web Access During Tests to Ensure Integrity

Control which websites test-takers can access during mobile assessments, just as on desktop. When mobile app blocking is enabled, students must activate Guided Access within the YuJa Verity Mobile Lockdown App, preventing them from opening other apps and ensuring consistent security across mobile and desktop devices.

Set Different Rules for Different Test-Takers

Create individual proctoring profiles to accommodate different testing needs. Whether you want to enable mobile exams for specific test-takers or add exemptions for those with accommodations, the Mobile Lockdown App offers customizable options that ensure your proctoring approach fits each situation.

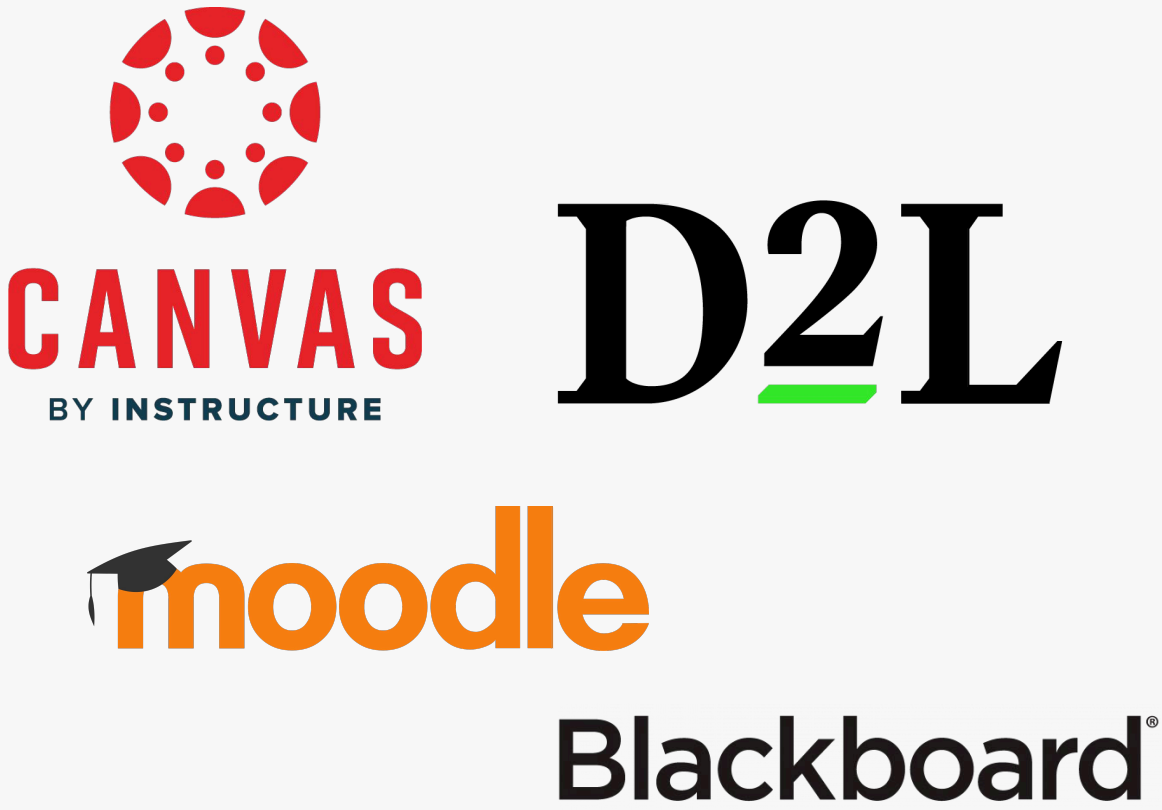

Manage Proctoring from Your LMS

The Mobile Lockdown App works within Canvas, D2L Brightspace, Moodle, and Blackboard LMSs. Test-takers access their assessments through the built-in browser, and instructors manage all lockdown settings from the same platform they use for desktop proctoring.

Direct Setup
Set up proctored assessments directly within your LMS.

Seamless Review
Review results and flagged events without leaving your LMS.

Unified Configuration
Configure lockdown restrictions and proctoring settings in one place.
