Lock Down the Test Environment

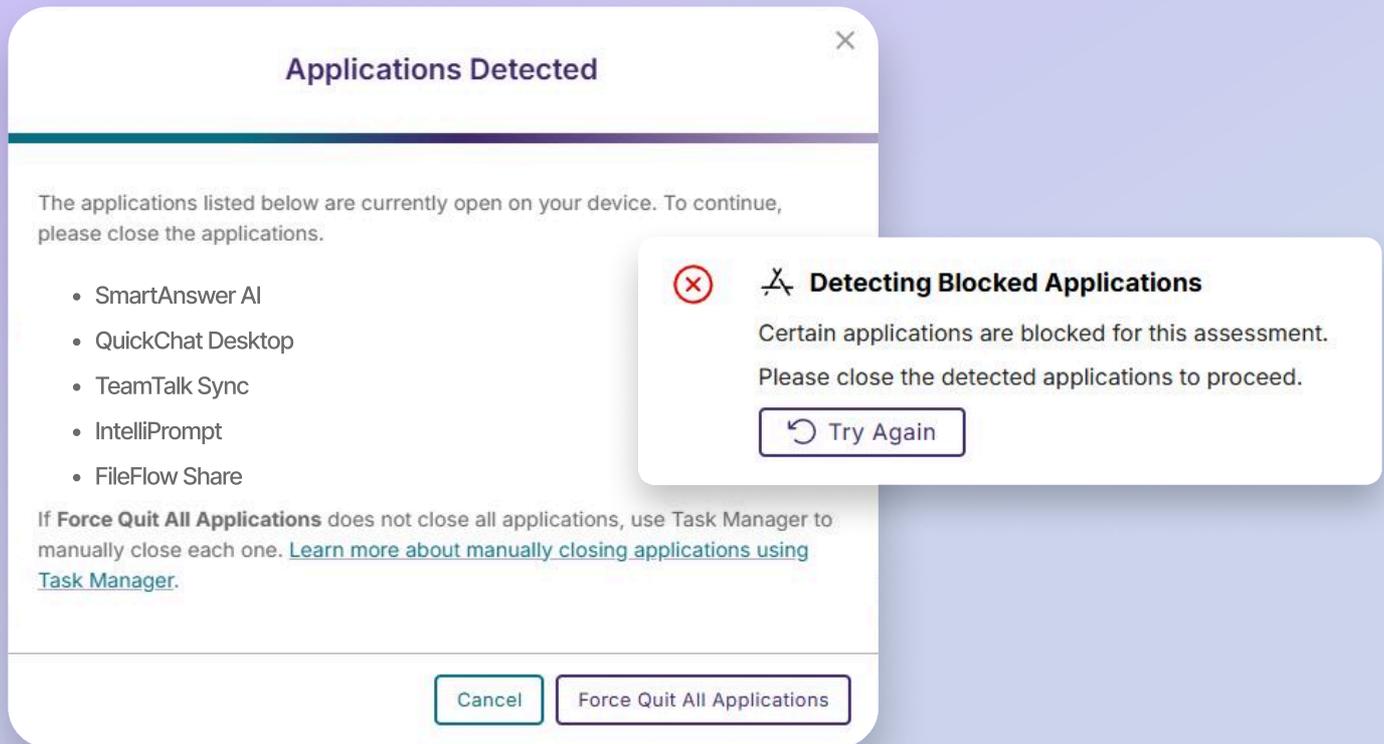

YuJa Verity's Lockdown Module creates a secure testing environment for proctored assessments, ensuring that every exam is conducted with integrity. By restricting navigation, disabling keyboard shortcuts, and blocking unauthorized applications, the module prevents students from accessing external resources or sharing answers, providing instructors with confidence in the validity of their assessments.

Designed to integrate seamlessly with your Learning Management System (LMS), the Lockdown Module supports multiple proctoring workflows, including automated proctoring, live proctoring, and Live Check-In. This flexibility allows institutions to scale monitoring efforts efficiently while accommodating different exam formats and security requirements.

The module is fully compatible with a wide range of devices, including Windows, Mac, iOS, Android, and Chrome OS, making it accessible for students on nearly any platform. This broad compatibility ensures a consistent, reliable, and secure testing experience for every learner, regardless of device.

See Exactly What's Running With Flexible App Control

Flexible Control Options

Instructors can block all apps, allow only approved apps, or block specific apps.

Detailed Activity Logs

View detailed logs of apps opened, closed, or running during sessions.

Enhanced Clarity

See which apps are blocked for clarity about integrity issues versus mistakes.

Monitoring Modes

Choose comprehensive blocking, selective allowlists, or monitoring only.

Keep Test-Takers Focused on Their Exam

The YuJa Verity Lockdown Module creates a secure testing environment that prevents test-takers from accessing unauthorized resources or opening additional windows during assessments, helping them stay focused on the exam content.

At the start of an exam, the lockdown browser can disable new tabs and close any previously open tabs to block access to external websites. It also restricts copy and paste through clipboard controls, reducing the risk of sharing or importing unauthorized information.

To further protect exam integrity, the module can enforce single-screen use to prevent multi-monitor cheating and block keyboard shortcuts and system commands that could be used to bypass the secure testing environment.

Capture the Complete Picture

Ensure exam integrity with the YuJa Verity Lockdown Module, giving instructors a complete view of every test session. By recording video, audio, and screen activity in real time, instructors have detailed documentation they can review anytime.

Webcam and screen recordings capture the full testing environment, while intelligent audio detection flags spoken keywords like "Hey Siri" or "What's the answer?" to highlight potential concerns.

During playback, visual overlays highlight faces and objects, making it faster and easier to focus on critical moments. With YuJa Verity, instructors gain a reliable, efficient solution for monitoring exams and maintaining academic integrity.

Face Not Detected

Please align your face within the camera frame to continue.

 You can proceed without your face in view, though this may impact your assessment status.

Don't show this again

Audio Warning ✕

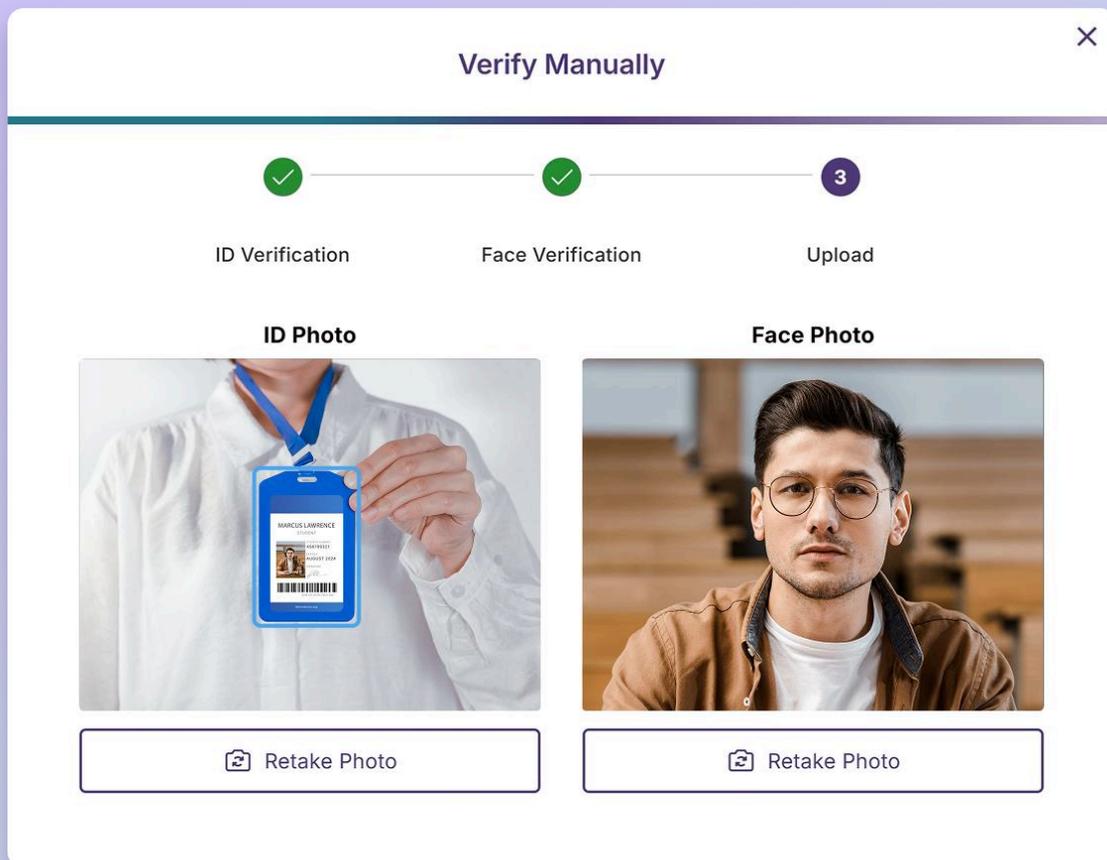

Your assessment requires you to be in a quiet environment. Please refrain from activities such as speaking that may cause audio disturbances.

Verify Test-Taker's Identity and Environment

Confirm test-takers are who they say they are and that test environments are free from unauthorized materials before assessments begin. Require an optional room scan using a webcam and verify ID with optional AI-enhanced facial recognition.

At the same time, support all learners by providing flexibility for those who need accommodations, creating individual exemptions with detailed notes and setting up institution-wide accommodation lists that apply automatically to all assessments.

Catch Issues Before They Become Problems

The screenshot displays the Verity proctoring interface for a 'Literary Theory Assessment' for 'Austin Morin'. The interface includes a 'Generate Report' button, navigation arrows, and a 'Severe' flag level. A summary bar shows 1 Severe, 2 Major, 0 Minor, and 3 Flags. The 'Webcam' tab is active, showing a video recording of a student. A tooltip at the bottom of the video indicates a 'Major' issue at 0:01:58: 'The proctoring session ended before the student could submit their assessment.' The event log on the right shows the following events:

Event Time (Duration)	Event Details
0:00:00	Info: Proctoring session has started
0:00:08	Info: Test-taker's connection to the Verity Cloud has been restored
0:00:09	Info: Assessment started
0:00:10	Info: Webcam recording ended
0:01:19	Severe: The test-taker has clicked the End Proctoring button to end the session

Browser Closure Detection

Automatic detection when test-takers close their browser before videos finish uploading.

Head Gesture Detection

Enhanced head gesture detection tracks head movement to monitor test-taker focus.

Submission Tracking

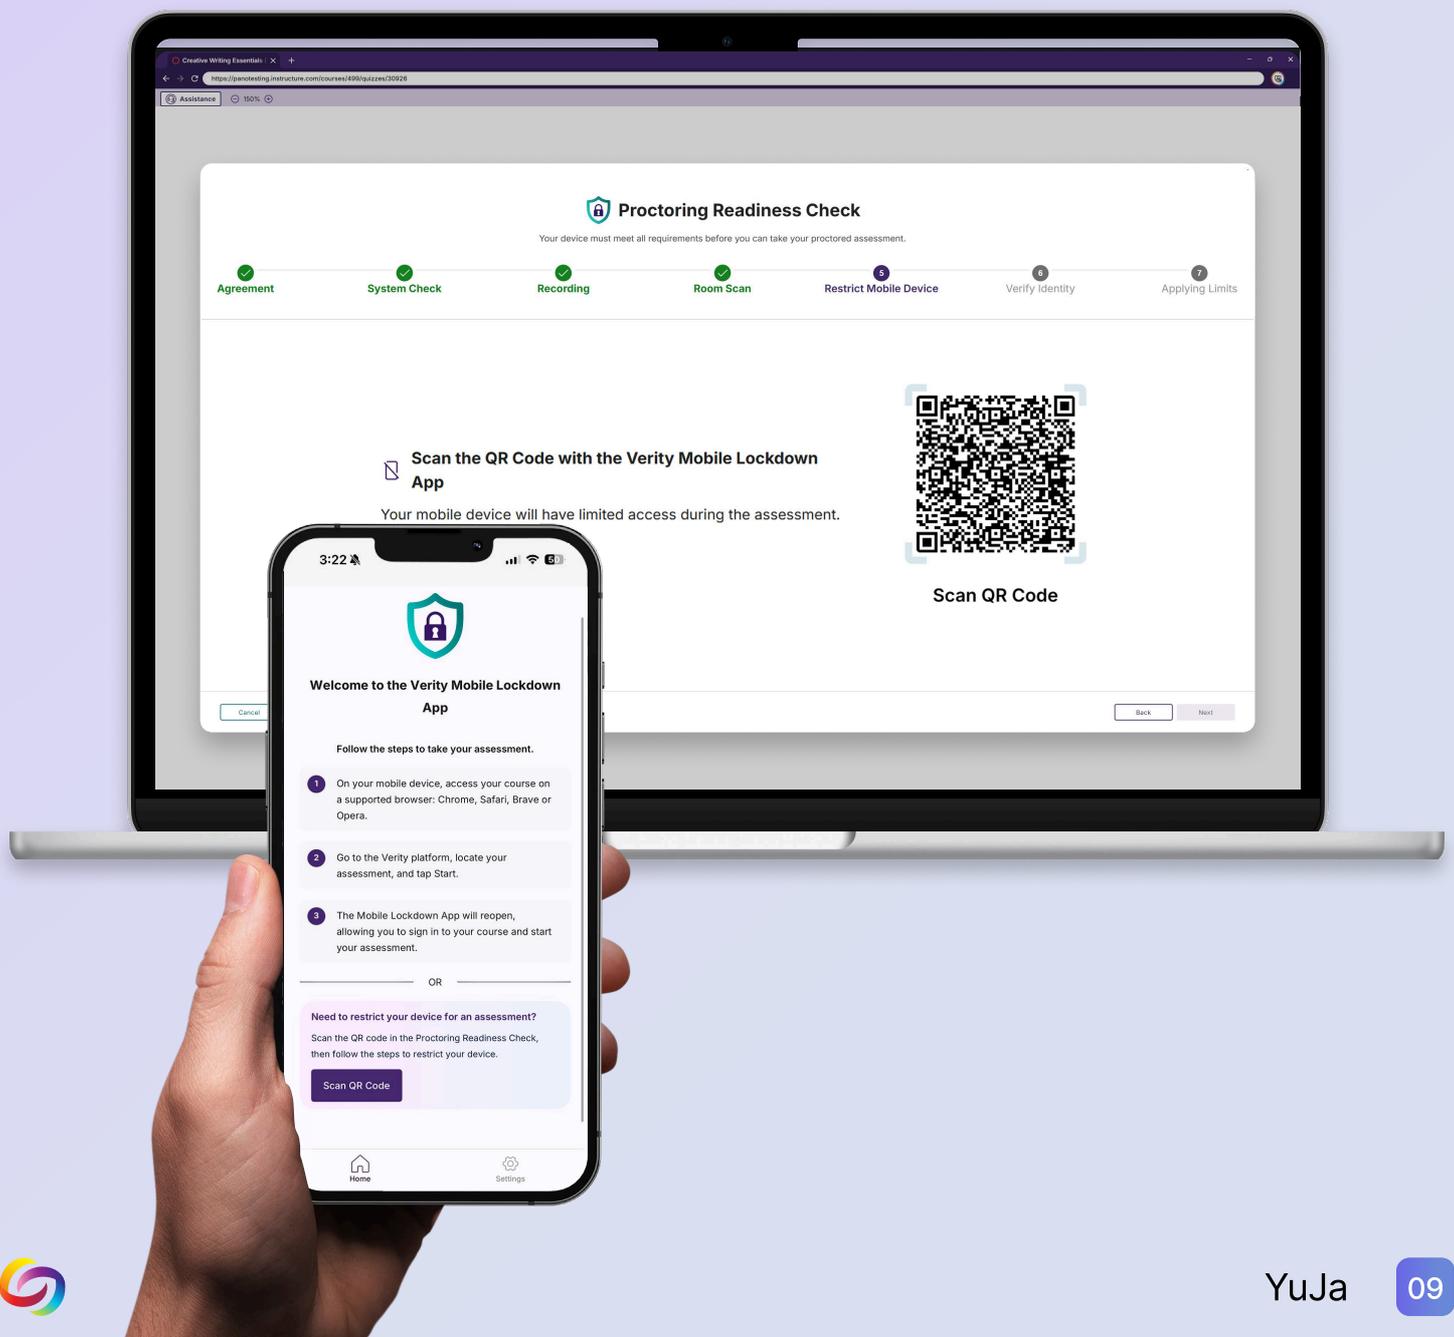

Flag assessments that were closed without submission.

Audio Transcription

Audio transcription creates downloadable transcripts of recorded sessions.

Lock Down Phones During Exams

Those taking computer-based tests can be required to lock down their cellphones, preventing texting, searching, or other unauthorized access during exams. Test-takers scan a QR code during setup to launch the Verity Mobile app, which guides them through the lockdown process on both iOS and Android devices.

Manage Proctoring from Your LMS

The YuJa Verity Lockdown Module integrates directly with Canvas, D2L Brightspace, Moodle, and Blackboard. Instructors configure all lockdown settings, review proctoring results, and manage assessments from the LMS.

Direct Setup

Set up proctored assessments directly within your LMS.

Seamless Review

Review results and flagged events without leaving your LMS.

Unified Configuration

Configure lockdown restrictions and proctoring settings in one place.
